iConnect

Coordinate work Ref. 8

iFlow

Move work forward without chasing the next approval

For operations directors, team leads and systems owners who standardise approvals

Roadmap: planned and not available today; a demo discusses your workflow and what is planned.

Does this sound familiar?

A request waits in a chat or an inbox. Nobody can tell who decides next, how long it has waited or whether it was approved, so people chase updates.

Approvals stall, routine steps depend on someone remembering, and managers spend their time chasing instead of deciding.

From the problem to the business gain

Conceptual illustration, not a product screen

The problem	What your team does	What you get	What the business gains
Requests waiting in chats and inboxes	Route each request to its named approver	A recorded decision and the next owner	Less chasing, visible delays

Three practical gains

Less time chasing approvals

Designed to send each request to the named approver and keep it in their queue until decided.

Overdue requests are visible, not hidden

Designed to show what is waiting, with whom and since when, and to flag overdue steps.

A record of who decided what

Designed to record every decision with its request and start the next responsible action.

What your team does

- ✓ Planned: submit a request through a configured workflow
- ✓ Planned: the named approver approves, rejects or asks for changes
- ✓ Planned: see what is waiting, with whom and since when

The useful output

- → A recorded decision on each request
- → The next responsible action, with a named owner
- → A view of what is waiting, with whom and for how long

iFlow

Ref. 8

What it needs

- **Workflow templates agreed with your team**
  The steps, the approvers and the due times
- **Approvers set up in your iConnect workspace**
- **A source of requests**
  A person who submits one, or an event from another iConnect product where that connection exists

What you gain by connecting it

8 ↔ 11 iKPI

Planned

iKPI (Roadmap) would show where work waits between departments, and iFlow would route the approved improvement action to its owner.

8 ← 9 iReview

Planned

A decision recorded in iReview (Roadmap) on the right content version would start the next responsible action in iFlow.

Planned: illustrative; not implemented yet

How your team would use it (planned, not available today)

Team member
Submits a request through a configured workflow
→ A request in the first approver's queue

Approver
Approves, rejects or asks for changes
→ A recorded decision

Operations manager
Reviews what is waiting and what is overdue
→ A short list of stuck requests to act on

What it is designed to give your business
Requests reach the right approver, and managers decide instead of chasing.

Next step

Request a demo to discuss your workflow

It is not available today. We walk through your workflow and what is planned, and agree whether it fits your scope.
