iSight

Spend less time assembling reports, and see what needs attention

For business owners, executives and the managers who prepare the weekly review

Roadmap: planned and not available today; a demo discusses your workflow and what is planned.

Does this sound familiar?

Before leaders discuss performance, someone stitches figures from several teams into a report, and the exceptions get buried.

Management time goes into assembling numbers, decisions wait, and problems surface after the fact.

From the problem to the business gain

Conceptual illustration, not a product screen

The problem	What your team does	What you get	What the business gains
Reports assembled by hand from several teams	Review exceptions and the source behind them	A decision or an owned investigation	Less report assembly, faster decisions

Three practical gains

Less time preparing reports

Designed to gather permitted summaries into one view, with no copying between reports.

Attention goes to exceptions

Designed to highlight what needs a decision, with the source behind each figure.

Each viewer sees only what they may

Designed to require reporting permission and to protect individuals in small groups.

What your team does

- ✓ Planned: choose the weekly leadership summaries
- ✓ Planned: review an exception and its source
- ✓ Planned: give each exception a named owner

The useful output

- → An exception reviewed with a named owner
- → A decision, or a request for investigation
- → A management summary without manual assembly

iSight

Ref. 10

What it needs

- **At least one source product**
  Another iConnect product whose summaries it presents
- **Agreed definitions**
  For each figure the leadership team will review
- **Viewers with reporting permission**
  Team members without it see no management summaries

What you gain by connecting it

10 ← 11 iKPI

— Demonstrated in testing

Pinned performance measures from iKPI (Roadmap) are designed to appear in the management view; so far this has been shown on demonstration data.

10 ← 7 iQuality

— Demonstrated in testing

Team-level summaries from iQuality (Roadmap), with small groups suppressed, are designed to appear beside other results. Individual results would stay out of the view.

Demonstrated in testing: shown working in test environments, before your own set-up

How your team would use it (planned, not available today)

Business owner
Chooses the summaries the leadership team reviews each week
→ One view of the agreed results

→

Leader
Reviews an exception and the source behind it
→ A decision, or a request for investigation with an owner

→

Department manager
Investigates and reports back at the next review
→ An owned action instead of a figure in a report

→

What it is designed to give your business
Leaders spend the review on decisions, and every exception leaves with an owner.

Next step

Request a demo to discuss your reporting needs

It is not available today. We walk through your workflow and what is planned, and agree whether it fits your scope.
